Map Layout

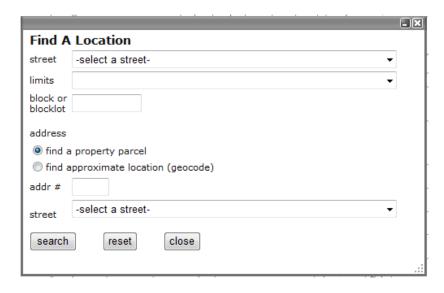

Search for Features

Search for features on the map including:

Parcels & Blocks Streets & Intersection Addresses

Click on <u>search</u> link on the toolbar
Fill out the *Find A Location* form and click on *search* button

- <u>Clear</u> form by clicking on *reset* button
- Close the form by clicking on close button or X button at top right of window
- Minimize the form by clicking on _ button at top right corner of window
- Restore the form by clicking on □button at top right corner

The selected feature results will be displayed in the left column Click on the links in the left column to view more information about the seleted features

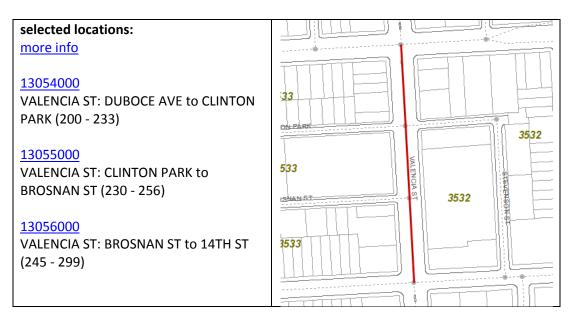

Identify Features

Click on the map to identify and get information about these type of features:

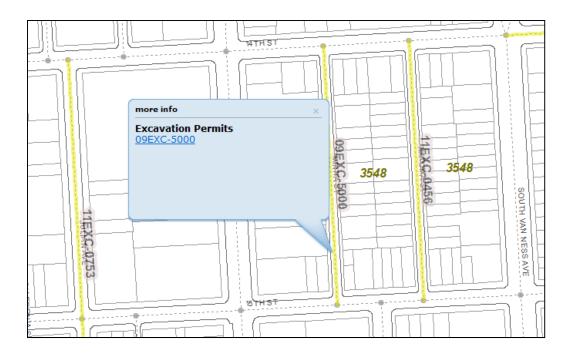

1. A parcel, street segment or Intersection

The selected feature will be highlighted in red Select multiple features by holding down the shift key The selected feature results will be displayed in the left column Click on the links in the left column to view more information about the seleted features

2. An added map layer (see page 5)

An info window will popup for most layers which displays inormation about the selected feature Click on the link in the info window to view more information if available.

Zooming and Panning

There are several ways to zoom and pan on the map:

Pan

Click and drag the mouse across the map Use the arrow keys

<u>Zoom</u>

Click or Drag the *slider* on the map to zoom in and out

SHIFT + Drag the mouse to zoom in

SHIFT + CTRL + Drag the mouse to zoom out

Use + key to zoom in a level

Use - key to zoom out a level

Mouse Scroll Forward to zoom in Mouse Scroll Backward to zoom out

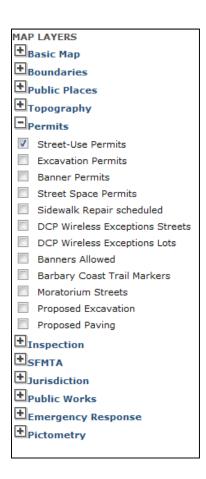

Adding Map Layers / Pictometry

Add layer to the map by clicking on map layers link on the toolbar

The layers list will be displayed in the left column.

Expand a map layer group by clicking on the + icon next to the group name

Check the layer to add / uncheck the layer to remove *

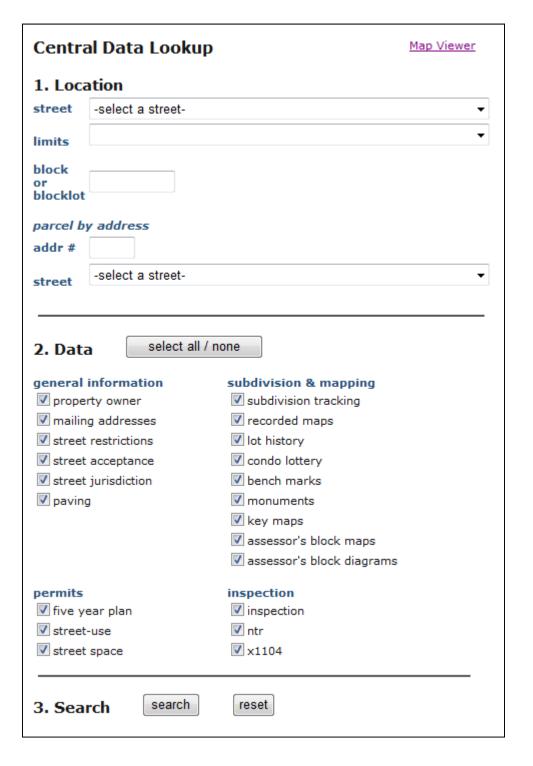

^{*}The Pictometry (aerial photography) Layer can be viewed when the map's scale is 1000 ft or less.

Central Data Lookup (CDL)

CDL can be opened from the map viewer by clicking on <u>central data lookup</u> link on the toolbar Or from this URL: http://bsmnt/mapviewer/cdl.aspx

CDL allows for a text based search of BSM's various databases

- 1. Select or enter the location to search
- 2. Select the checkboxes next to the datasets to be searched for
- 3. Click on Search button

Polygon Select Features

Use the mouse to draw a polygon on the map and select and query the features it contains

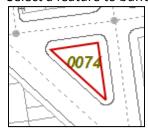

- 1. Click on polygon select link on the toolbar
- 2. Select the type of features to select in the left column (parcel, block, street segments and intersections (cnns))
- 3. Click on the map to draw the vertices of the polygon at least 3 vertices must be added to the map. Double-click to complete polygon and query features.
- 4. Click on the links in the left column to view more information about the seleted features

Buffer Select Features

Use a selected feature to query other features within a selected distance of that feature

1. Select a feature to buffer by clicking on a parcel, street segment or intersectin on the map or use the search tool.

2. Click on buffer select link on the toolbar

3. Select the type of features to select in left column of browser (parcel, block, street segments and intersections (cnns)) and the distance to buffer

4. Click on the buffer button

5. The selected buffered features will appear on the map in purple.

6. Click on the links in the left column to view more information about the seleted features selected locations:

Map Scale

Measure Distance

Click on the measure link on the toolbar

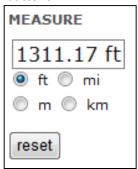

Click on map once or more to draw distance to measure.

Double-click the last point to get the total distance.

Distance will appear in feet (by default) in left column

Distance can be converted to miles, meters and kilometers by clicking on respective radio buttons

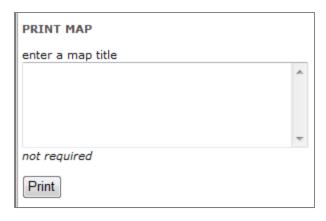

Click on *reset* button to reset the map and left colum to measure again Click on clear selection link on the toolbar to exit measure function

Print

Click on the print link on the toolbar

Title box and print button will appear in left column. Enter a map Title if desired and click 'Print' button. A new window will popup with an image of the map. This image can be either printed (landscape preferred) or copy / pasted into another document such as Eord or an email message.

Map Features Results

Click on map feature results link to show the selected locations data in the left column

Clear Selection

Clickon <u>clear selection</u> link on the tool bar to clear the map of any graphics and clear the left column of any selected locations data

Refresh map

Click on <u>refresh map</u> link to refresh the browser and bring map to its initial state. This will zoom the map to the initial extent as well as clear the map of any graphics and clear the left column of any selected locations data.

Google Street View

Access google street view by selecting at least one feature on the map

Click on street view link on the toolbar

A new widnow will open and show approximately the same location in google street view as the map viewer

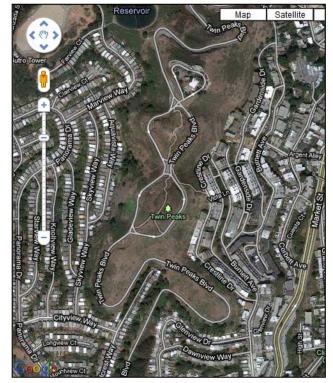

Google Map/Satellite View

Click on the map/satellite view link in the toolbar.

The google map/satellite will open in a new window and display approxmately the same map extent as is seen in the map viewer

Using the URL (address) to query the map

Add parameter name/value pairs to the URL address of the map to query and display features

 $\ensuremath{^{\pmb{\ast}}}$ To query more than one feature separate values with a comma
